1. I can conduct investigations and make observations to explain the affect of sunlight on Earth's surface.
2. I can make observations about the effect that forces such as pushes and pulls have on motion.
3. I can focus on identifying and describing materials and physical properties of objects.
4. I can make observations about how living things change their environments to meet their needs.
5. I can see how a butterfly changes and study it's life cycle.
6. I can sort and classify objects into categories based on their size, shape, color, and mass (thick or thin).
7. I can use observations and models to describe, represent, and ask scientific questions about needs, relationships, and environments of plants and animals, as well as why all living things use natural resources.
8. I can explore ways to reduce human impact on the environment and other living things within their environment.
9. I can make observations about the weather and the seasons.
